## 1 Overview

PBRUTTO covers all individuals, who were successfully interviewed or were supposed to be interviewed at least once.

The data set provides gross cross-sectional information over time for all SOEP individuals living in realized households. Unique identifiers are PID SYEAR (PERSNR SYEAR) indicating individual household members over time. The personal IDs PID (PERSNR) and the Case-ID CID, indicating the source household within each (sub-)sample SAMPLE1, are fixed, whereas the household ID HID may vary for individuals over time.

Additional demographic information like SEX, GEBURT\_v1/v2 and PNAT\_v1/v2 are included in the dataset – indicating the available information at the time of the interview. For time-consistent applications, it is recommended to use the demographics in [PPATH/L].

In the following, the already mentioned information and variables on:

- The respondent's affiliation to the household
- Respondent's interview status, work form and result
- Respondent's penal history
- Respondent's dwelling status
- Additional questionnaires
- Non-respondents

are documented.

If there is a person, who is normally lives in your household but is currently absent due to a hospital stay, long trip, boarding school or rest home (asylum\*), military or civil service, etc. please include this person. For each person, the gender, birthdate, and position in the household should be written. So there is no confusion, the first name should be included. We will start with the principle earner (hv).
