

Slightly More Women in Germany's Corporate Boardrooms—Especially in DAX 30 Companies

by Elke Holst and Julia Schimeta

Despite the commitment that has been expressed by German companies to bringing more women into top management, at the end of 2012, only four percent of all seats on the executive boards and just under 13 percent on the supervisory boards of the top 200 companies in Germany were occupied by women. This corresponds to an increase of one percentage point on the previous year in both cases. Nevertheless, at the end of 2012, women held almost eight percent of seats on the executive boards of the DAX 30 (up 4.1 percentage points on the previous year) and over 19 percent of seats on DAX 30 supervisory boards (up 3.7 percentage points)—which may well be attributable at least in part to the public attention focused on these companies. In companies with government-owned shares, which are often smaller than the DAX 30 or the top 200 companies, the representation of women was somewhat higher at over 11 percent on executive boards and almost 20 percent on supervisory boards. Overall, employee representatives still make up the majority of women on supervisory boards. In none of the company groups studied had the strong predominance of men declined significantly. At the start of the period under investigation, the number of women on the boards was too low and the impetus for change was too weak. Within Europe, Germany is ranked sixth in terms of the percentage of women in the top-level decision-making bodies of listed companies. On the one hand, this is indicative of even more severe difficulties faced by women seeking executive positions in other countries. On the other hand, it should be noted that German firms rank relatively high because only the supervisory boards of the DAX 30 are taken into account in the European comparison. This focus on supervisory boards of DAX companies is too narrow, however, for an accurate assessment of women's opportunities in corporate boardrooms.

In this article, we analyze the representation of women on the executive and management boards (henceforth executive boards) as well as the supervisory boards and administrative councils (henceforth supervisory boards) in Germany's largest commercial enterprises based on data collected annually by DIW Berlin.¹ The present survey covers the 200 commercial enterprises with the highest turnover outside the financial sector.² DAX 30, MDAX,³ and SDAX⁴ companies were analyzed separately, and 60 companies with government-owned shares were also included in the survey.

For an in-depth treatment of the different segments of the financial sector, another survey of the top-level boards of Germany's 100 largest banks and 61 insurance companies was conducted, and comparisons are drawn between the public and private sectors in a separate article in this issue of DIW Economic Bulletin.⁵ In addition, the top management positions on supervisory and decision-making bodies in the financial sector were analyzed on both the EU and national level. Overall, the top management positions of significantly more than 500 companies and institutions were considered.

¹ Most recently in 2012, see E. Holst and J. Schimeta, Top-Level Management in Large Companies: Persistent Male-Dominated Structures Leave Little Room for Women, DIW Economic Bulletin, no. 4 (2012).

² The selection was based on Wolters Kluwer Deutschland GmbH, Die großen 500. Deutschlands Top-Unternehmen, (Müßig Verlag, November 2012). Research on the composition of top-level management bodies in Germany's largest 500 companies was carried out between November and the end of December 2012. Information is based on the companies' own statements published on the Internet, annual reports and accounts from 2011, articles in the German Federal Gazette (Bundesanzeiger) and on inquiries to companies by DIW Berlin.

³ With regard to market capitalization and trading volume, the MDAX companies are ranked just below the DAX 30 companies (mid caps).

⁴ With regard to market capitalization and trading volume, the SDAX companies are ranked just below the MDAX companies (small caps).

⁵ For the findings, see E. Holst and J. Schimeta, Financial Sector: Male Dominance in Top Decision-Making Bodies Remains Overwhelming, in this issue of DIW Economic Bulletin.

Executive boards, in particular, have virtually no female representatives.

Four Percent Women on Executive Boards of Top 200 Companies

In recent years, some companies appointed their first ever female executive board members. However, these isolated appointments failed to result in an increase in the overall share of women on executive boards in Germany's top 200 companies: At the end of 2012, the figure remained at a very low level with only four percent

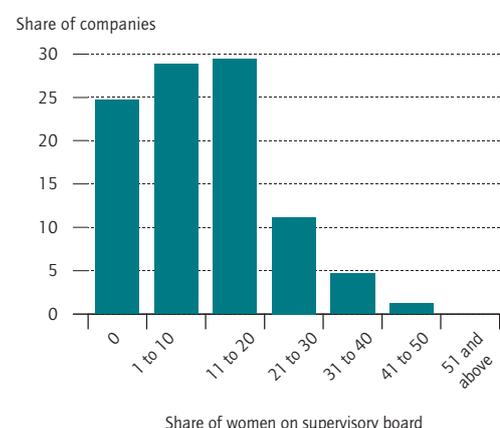

of the almost 1,000 board members being women (see Table 1). The 39 female board members (see Overview 1) were faced with an overwhelming majority of 931 male members. The share of women on the executive boards of Germany's top 200 companies was up by one percentage point on the previous year.

It has been the largest companies in particular that have recently appointed women to their executive boards.

Figure 1

Share of Companies by Proportion of Women on Supervisory Boards

In percent

Supervisory boards usually have up to one-fifth female members.

Overall, with their nine female executive board members, the top 10 companies account for almost one-quarter of all women on executive boards. Two of the 39 women board members in the top 200 companies also chair the board.⁶ Representing just one percent of all executive chairpersons, women CEOs are a major exception to the rule. At the end of 2012, 83.5 percent of executive boards were exclusively male.

Almost 13 Percent Women on Supervisory Boards

The proportion of women on supervisory boards is traditionally higher than on executive boards, not least thanks to employee co-determination. At the end of 2012, just under 13 percent of supervisory board members in Germany's top 200 companies were female (see Table 1). As with the executive boards, this represented an increase of one percentage point compared to 2011. Nowadays, it is not only the employees who delegate more women to supervisory boards but also the shareholders. However, the fact remains that the majority of female board members are employee representatives and were therefore appointed to the board on the basis of co-deter-

mination legislation.⁷ The position of chairperson (always a shareholder representative) was occupied by only four women, compared to 167 men (almost 98 percent).

⁷ According to the Mining Co-Determination Act (Montan-Mitbestimmungsgesetz, MontanMitbestG) BGBI, Sections 1 and 4, businesses in the coal, iron, and steel industry with more than 1,000 employees must have a supervisory board with equal representation of shareholders and employees. According to the Co-Determination Act (Mitbestimmungsgesetz, MitbestG) BGBI, Sections 1 and 7, it is also mandatory for companies with more than 2,000 employees and with the legal status of an AG, GmbH, KG a.A. or cooperative to have a supervisory board with equal representation of shareholders and employees. According to the Drittelbeteiligungsgesetz (DrittelbG) BGBI [One-Third Employee Representation Act], Sections 1 and 4, in companies with more than 500 employees and with the legal status of an AG, GmbH, KG a.A, insurance association a.G., or cooperative, one-third of supervisory board members have to be employee representatives. www.boeckler.de/5543_33350.htm [December 11, 2012].

© DIW Berlin 2013

The share of women members of supervisory boards tends to be higher among slightly smaller companies.

Over three-quarters of the top 200 companies have a minimum of one female supervisory board member. The supervisory boards in almost 60 percent of these companies comprise up to one-fifth women (see Figure 1). In 15 companies, women constitute one-quarter of the supervisory board membership (see Table 2). Only twelve companies have a higher proportion of women. So far, companies with supervisory boards comprising a third or more women remain the exception to the rule. One solitary company has equal male and female representation on its supervisory board: Douglas Holding.⁸ Approximately one-quarter of the top 200 companies

⁸ Here, there are eight male and eight female board members. Seven of the eight women on the supervisory board are employee representatives.

studied have failed to appoint a single female supervisory board member.

Listed Companies: DAX 30 Gather Speed While Others Lag Behind

The DAX 30 companies are in the public and political eye when it comes to women's representation in senior management. Evidently, the high level of public attention, against a backdrop of political demands for a statutory system of quotas for women, has led to a growing number of female appointments to these companies' top boards. The number of women on the executive boards of Germany's largest DAX 30 companies had ris-

In 2012, for the first time, two supervisory board chairwomen were appointed to German listed companies.

en from seven in 2011 to 15 at the end of 2012 (see Table 3), which corresponds to an increase of 4.1 percentage points. However, at 7.8 percent, that is, 15 out of 193 positions, the share of women executive board members remains low (see Overview 2). At the end of 2012, all executive boards were chaired by men.

An analysis of the other listed companies shows that Germany's 50 MDAX companies are lagging behind when it comes to improved gender equality in top management. At the end of 2012, only 2.4 percent of executive board members were women (compared to 2.3 percent at the end of 2011) (see Table 3). In these companies, too, there is a complete absence of women CEOs. The 50 listed SDAX companies already started at a high-

er level of almost five percent in 2011 and, by the end of 2012, had reached over seven percent. Again, Germany's 50 SDAX companies had only one woman as head of the executive board (see Overview 2).

The share of women on supervisory boards in Germany's DAX 30 companies increased by 3.7 percentage points to over 19 percent between 2011 and the end of 2012. This suggests increased momentum with regards to the delegation of women to boards—and this applies to both employee and shareholder representation. The majority of female supervisory board members continue to be employee representatives (63.5 percent). Women chairing supervisory boards are in a very small minority: At the end of 2012, there were two women (twice

as many as in 2011) chairing the supervisory board of a DAX company (6.7 percent).⁹ Almost all of the DAX 30 supervisory boards have at least one female member, but two are still exclusively male.¹⁰

According to data from the German Women Lawyers Association, in 2012, 17 of the DAX 30 held supervisory board elections.¹¹ The result was that 72 board members on the supervisory boards of the DAX 30 were either newly elected or re-elected shareholder representatives. These positions were occupied by women in almost 21 percent of cases. However, this progress was not significant enough to bring about the more dramatic increase in the overall share of female board members that many have been calling for. To successfully tackle the prevailing gender inequality in the distribution of supervisory board positions in the near future would require both employees and shareholders¹² to delegate many more women.

When it comes to the share of women on supervisory boards, MDAX and SDAX companies are clearly lagging behind the DAX 30 companies: MDAX companies have an almost 14 percent share, while, among SDAX companies, it is over eleven percent. However, this share ranks the latter below the top 200 companies (12.9 percent). This is surprising since smaller enterprises generally tend to recruit more women into top management positions than larger companies.¹³ The majority of women on the supervisory boards of MDAX and SDAX companies are also employee representatives. In contrast to the DAX 30 companies, there was not a single supervisory board chairwoman among the 100 MDAX and SDAX companies studied.

Companies With Government-Owned Shares: Progress Made but Still No Sign of Equality

DIW Berlin recently published its third study presenting comprehensive data on public companies. The survey covered 60 of the companies with direct or significant indirect government ownership listed in the govern-

⁹ These are Dr. Simone Bagel-Trah at Henkel AG & Co KGaA and Sari Baldauf at Deutsche Telekom AG.

¹⁰ This applies to Fresenius Medical Care AG & Co. KGaA and Fresenius SE & Co. KGaA. Furthermore, both companies have exclusively male executive boards.

The share of women CEOs among companies with government shares almost doubled between 2011 and 2012.

ment's equity holdings report. This included companies from the transport and energy sectors and also infrastructure services for the German Armed Forces, research, and culture.¹⁴ Since this group consists predominantly of small enterprises, a comparison with Germany's large companies is only possible to a limited extent.

Share of Executive Chairwomen Almost Doubled to Over Ten Percent

At the end of 2012, over eleven percent of executive board members were women (see Table 4), which corresponds to 16 out of 143 seats and an increase of three percentage points on 2011. There was a leap forward with re-

¹⁴ For an overview of the companies, see Federal Ministry of Finance (Bundesministerium der Finanzen), Die Beteiligungen des Bundes. Beteiligungsbericht 2011, (Berlin: December 2011).

gard to chairperson appointments: The share of women appointed to these positions almost doubled between 2011 and 2012 with an increase of five percentage points to 10.5 percent. This means that the companies with state ownership top the ranking of the groups of organizations studied. However, even for these companies, gender parity is still a long way off: At the end of 2012, almost 90 percent of executive boards were still chaired by men.

According to another study, in terms of female appointments to top management boards, with a 15 percent share of women, municipal enterprises in the capital cities of the German Länder are performing better than nationally owned enterprises.¹⁵

Women Make Up One-Fifth of Supervisory Boards

Women held almost one-fifth (19.9 percent) of seats on the supervisory boards of companies with government-owned shares in 2012 (see Table 4). The proportion of women on these boards was up 2.2 percenta-

ge points on the previous year. Not only in the executive boards studied but also in the supervisory boards, there is a noticeable increase in the share of chairwomen of supervisory boards (5.7 percentage points), now at almost 21 percent. It is even slightly higher than the overall proportion of women on the supervisory boards.

Here, it should be noted that many of the supervisory board chairperson positions are assigned automatically to officials appointed to top posts in German federal ministries (see Overview 3). While for nine of the eleven female chairs of the supervisory boards this mechanism has served as a »stepping stone« into a supervisory board, for the other 79.2 percent, it merely increased the predominance of men. An increase in the share of women in politics and public administration is therefore an essential prerequisite for the appointment of more women as chairs of supervisory boards. But despite the Federal Equal Opportunities Act (Bundesgleichstellungsgesetz), even the core administration of the German government is still a long way from gender equality in its leading positions.¹⁶

The government has a varying degree of influence on appointments to individual positions on the supervisory boards of companies with government-owned sha-

© DIW Berlin 2013

The overall share of women in leadership positions is only rising very slowly.

res. There were far fewer women among the supervisory board members directly appointed or delegated by the government than by the other shareholders. In 2011, the share of women delegated by the former was only 14 percent.¹⁷ Of particular significance at federal government level is the Act on Appointments to Federal Bodies (Bundesgremienbesetzungsgesetz, BGremBG) of 1994, which obliges the government to establish or to maintain equal participation of women and men on committees (Section 2 of Act on Appointments to Federal Bodies). Apparently, however, this act has had only a limited impact to date.¹⁸ Here again, a comparison with the municipal enterprises also shows that the federal government is lagging behind. On the supervisory boards of the Länder capitals the level of representation of women was already almost 28 percent in 2009.¹⁹

If public companies want to set an example in the appointment of women to top-level management positions, they still have a lot of catching up to do—particularly at federal government level.

¹⁷ Bundestag printed paper no. 17/6790 dated August 12, 2011.

¹⁸ For an overview of the legal basis for promoting women to leadership positions in public companies, see J. Schimeta, *Einsam an der Spitze. Frauen in Führungspositionen im öffentlichen Sektor* (Berlin: Friedrich-Ebert-Stiftung, 2012).

¹⁹ U. Papenfuß and M. Schrader, *Frauen in Topgremien öffentlicher Unternehmen. Ergebnisse der ersten repräsentativen Längsschnittstudie*, *Zeitschrift für Corporate Governance (ZCG)*, 6 (2011): 258–263, 260.

Virtually No Overall Change in the Number of Women in Senior Management of German Companies

If the study is extended to also include management boards of smaller and large enterprises as well as to heads of divisions in large companies and senior positions in the civil service, then, at just over 30 percent overall, the share of women in leadership positions is significantly higher than on the executive and supervisory boards analyzed in the present report (see Figure 2). This figure reported by the German Federal Statistical Office has only slightly increased over the years: It was already just over 27 percent in 2002.

International Comparison: Norway the Clear Leader

In comparison to other EU member states with regard to the proportion of women in the top decision-making bodies of companies, Germany is in a respectable position (ranked 6th), on level pegging with the UK, Denmark, and Bulgaria (see Figure 3)—as was already the case in 2011. With 16 percent women overall, these countries are slightly above the EU average. It should be noted, however, that the majority of women are appointed to the boards as a result of German co-determination legislation and only the DAX 30 companies were included in the comparison.²⁰ The Nordic countries Sweden and Finland are still at the top of the rankings, along with Latvia. Norway remains the only country in Europe to have almost achieved gender equality (45 percent women) on its supervisory boards.

In 2012, the EU Commission compiled an overview of the development of the share of women on supervisory boards in the European member states from 2004 to 2012 and correlated this to the measures taken to improve the situation. It was found that in countries that had adopted legislation on quotas, the proportion of women on supervisory boards had increased by an average of 12 percentage points. In countries where no legal initiatives had been taken, the share of women on supervisory boards had increased by one percentage point on average.²¹

²⁰ It should also be noted that the number of listed companies analyzed in the individual countries ranges from 50 in the UK and Turkey to 10 in Luxembourg, Macedonia, and Slovakia and 8 in Iceland. A total of 715 companies were included, 588 of which are in the EU-27 countries.

²¹ European Commission, *Women on boards - Factsheet 2: Gender equality in the Member States*, Figure 2.2: http://ec.europa.eu/justice/gender-equality/files/womenonboards/factsheet-general2_en.pdf [December 20, 2012].

From the short-term development of the proportion of women from October 2010 to January 2012, it was also evident that countries with statutory quotas on women, such as France and Iceland, were the frontrunners (see Figure 4). Growth was moderate in Norway and appeared to slow down as soon as the stipulated quota was reached.

The trend towards more women in the top positions did not continue in all countries. In some Eastern European countries such as Romania, Hungary and Slovakia, the proportion decreased by eight to eleven percentage points during the observation period. It is perhaps surprising that in Denmark and Sweden growth appeared to stagnate and even slightly decrease. Sweden recently declared that it was opposed to the introduction of a quota for women, after the country had previously threatened to introduce new legislation on this if the share of women on supervisory boards did not reach 36 percent by 2014.²² Denmark also declared that it was opposed to such a quota and, in November 2010, it launched *Operation Chain Reaction*, developed by the *Committee on Corporate Governance* and based on the voluntary involvement of companies. This was a joint initiative by the government and Danish trade and industry associations.²³

Political Initiatives at EU and National Levels

EU Commission Increases Pressure: Draft Directive for Statutory Quota for Women Passed

On 14 November 2012, the EU Commission approved a quota for women of 40 percent for supervisory boards of listed companies.²⁴ The EU Commission's draft directive stipulates that private companies must reach the target by 2020; public companies have until 2018.

In Europe, Norway has the most women in top-level decision-making bodies in Norway. Germany is just above the EU average.

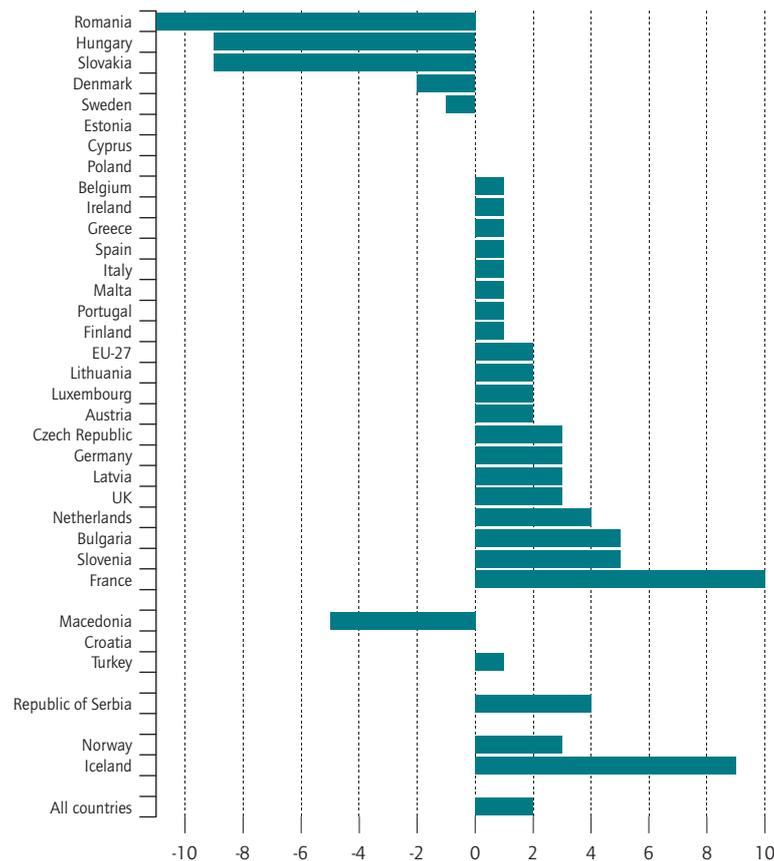

The draft makes it mandatory for member states to introduce dissuasive sanctions when the directive is implemented. The draft now still has to be debated in the European Parliament and then ratified by the Council of Ministers.

The proposal is expected to be approved by a majority vote in the European Parliament. In the Council of Ministers, some member states have already announced

Figure 4

In Germany the share of women in top decision-making bodies has recently increased, while in some East European countries it has fallen sharply. France shows the strongest growth.

their opposition, including the German government.²⁵

²⁵ Federal Minister for Family Affairs Kristina Schröder, Mit voller Kraft gegen die EU Frauenquote, Handelsblatt, November 15, 2012. www.handelsblatt.com/politik/international/familienministerin-schroeder-mit-voller-kraft-gegen-die-eu-frauenquote/7393050.html [December 20, 2012]. Federal Chancellor Angela Merkel and the Chairman of the Christian Social Union (CSU) Horst Seehofer agreed to the *flexi-quota* back in May 2012; see www.spiegel.de/wirtschaft/soziales/flexi-quota-merkel-und-seehofer-wollen-gesetz-a-835158.html [January 4, 2013]. The idea behind the *flexi-quota* approach is to achieve an increase in the share of women through more transparency in the representation of women in leadership positions. There is, however, no draft bill to legislate for this at present. For information on the *flexi-quota*, see www.frauenquote.de [January 4, 2013].

However, the picture is different in the German Bundesrat (the upper house of parliament). Here, the majority voted in favor of the EU's initiative on December 14, 2012.²⁶

Bundesrat Votes for Quota for Women

Over the past few years, there have been numerous initiatives in Germany with the aim of increasing the share of women in managerial positions.²⁷ On September 21, 2012, the German Bundesrat voted in favor of the introduction of a statutory quota for women on supervisory boards. The draft law proposed by the Länder of Hamburg and Brandenburg governed by the Social Democrats (SPD) was adopted with a majority supported by votes from the grand coalitions in Saxony-Anhalt and in Saarland led by the Christian Democrats (CDU). The draft provides for a statutory 40 percent quota for women on the supervisory boards of listed and co-determined companies.²⁸ The law envisages this quota being met in two stages with a transition period lasting until January 1, 2023. The draft law will apply to both shareholder and employee representatives in the boards. Following an initial debate in the Bundestag (lower house of parliament) on November 21, 2012, the draft law was referred to the Committee on Legal Affairs of the German Bundestag.

Corporate Culture Presents a Challenge

As a result of the sharp decrease in the potential workforce after 2015 at the latest, companies will face stronger competition for skilled professionals. In order to retain highly qualified women in a company, it is essential to make managerial positions more accessible to them also at higher levels. Companies that are already taking appropriate measures now will be at an advantage in the future. Flexible career opportunities and working hours will particularly gain importance in particular. It is becoming even clearer that younger men—particularly fathers—are increasingly reluctant to be working around the clock, leaving hardly any time for their fa-

Box

Measures to Increase the Share of Women in Companies

In the past, DIW Berlin has proposed various measures to increase the share of women in leadership positions.¹ The following five-point plan is still relevant:

1. The company management should identify the increase in the share of women in leadership positions as a corporate objective (commitment).
2. A binding target and a realistic timeframe for achieving the objective should be drawn up. Involvement of all levels of management is essential to be able to realize a sustainable increase in the number of future female executives. Target agreements with the current managers and a system of controlling along with incentives and sanctions are further steps needed to achieve the desired objective.
3. Transparency in appointments and promotion to leadership positions is another important prerequisite. This would make it possible to evaluate performance objectively using clearly defined criteria. Moreover, more transparency concerning salaries and bonus

payments would constitute a step in the right direction.

4. It is important to call into question the norms and structures characterized by the traditional everyday realities of men—such as excessive working hours and a permanent presence culture—and to introduce flexible career models for both sexes. Irrespective of the need to reconcile family and working life, the subject of work-life balance in managerial positions continues to gain importance for both women and men.
5. Corporate culture must become more open to women in top management positions, and gender stereotypes should be dismantled. New role models in top management positions could serve as helpful examples. This also applies to men who reconcile their managerial responsibilities with time spent actively with their families. Moreover, it is essential to emphasize the benefits of diversity and to overcome the resistance which is virtually always associated with change.

Finally, it should be mandatory—not only for joint stock corporations but for all companies—to provide information about the composition of their management on the company website and in annual reports.

¹ Recently, for instance, Holst and Schimeta, *Top-Level Management*, (2012): 12 f.

mily.²⁹ To date, however, traditional part-time work has rarely been compatible with a managerial position.

One possible way of achieving greater flexibility in managerial positions for women and men might be to work slightly less than full-time for a temporary period. This would give both sexes the chance to share family responsibilities with their partners and to better reconcile work and family life. If companies can provide care services on demand, for instance, this is always a great help (not only) for managers with children (or other dependent persons requiring care).

An even greater challenge is opening up the corporate culture to women in managerial positions because this

means breaking down gender stereotypes.³⁰ For instance, in a professional context, women also always come up against their traditional gender role yet are judged according to standards based on the everyday realities of men (“double bind”).³¹ The result is that those doing the hiring tend to see less leadership potential in women than in men. Similarly, if women reach leading managerial positions and behave assertively, this is seen in

²⁹ Väter gGmbH, *Trendstudie moderne Väter, Wie die neue Vätergeneration Familie, Gesellschaft und Wirtschaft verändert* (Hamburg: 2012).

³⁰ S. Kaiser, K. Hochfeld, E. Gertje, and M. Schraudner, *Unternehmenskulturen verändern – Karrierebrüche vermeiden* (Fraunhofer: 2012).

³¹ K. Hall Jamieson, *Beyond the Double Bind. Women and Leadership* (Oxford University Press, 1995). The image of Hillary Clinton in the presidential election campaign of 2007/2008 is frequently cited in the literature to illustrate the double bind phenomenon; see, for instance, Hall Jamieson, *Beyond the Double Bind*, Caroline Turner, *Hillary Clinton and the Double Bind* (The Women's Vision Foundation, 2008). http://difference-works.com/wp-content/uploads/Double_Bind_Article_7-08.pdf [January 4, 2013].

a less positive light than if men do the same.³² On the other hand, young men often still have the problem of not being so easily accepted as (potential) managers when trying to spend more time with their families. Here, too, a concerted effort is required to support and value the different lifestyles. In light of this, new career patterns and role models for women *and* men is in the interests of both sexes.

Conclusion

In the last few years, some large German companies have more frequently appointed women to top-level management. This also applies to the DAX 30 companies in particular, which achieved a significantly greater proportional increase in women in top-level management than, for instance, the top 200 companies. However, overall growth was low; it occurred in too few companies and had started from too low a level to significantly alter the overwhelming predominance of men on executive and supervisory boards.

If the supervisory boards of large companies are to achieve the shares of 30 or 40 percent women repeatedly called for in the political and public arenas at any point in the foreseeable future, considerably more ambitious steps would be required than those taken so far. In the past, DIW Berlin has proposed various measures for companies to increase the share of women in leadership positions (see box).

In view of the current low level of representation of women, the EU Commission substantiated their initiatives on the statutory regulation of the supervisory boards of listed companies and voted for the introduction of a statutory quota of 40 percent. In 2012, the German Bundesrat also voted for the introduction of a quota for women to be applied to the supervisory boards of listed and co-determined companies. The law stipulates a quota of 20 percent as of 2018 and 40 percent as of 2023 which is intended to give companies sufficient time to adapt to the new requirements.

New appointments or reappointments to many supervisory boards will be made in the course of 2013. Con-

sequently, there will be a chance to appoint more women in the near future. The next big round of new appointments after this will be in 2018. It will be possible to achieve the targets stipulated by the EU Commission for supervisory boards if decisive action is taken. If there is not a fundamental shift in decision-making on appointments of executive board members, however, the overwhelming predominance of men on executive boards will continue.
