SOEP-IS 2016—BIOPAREN: Biography In- formation on the Parents

SOEP-IS Group

Running since 1984, the German Socio-Economic Panel study (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin.

The aim of the SOEP Survey Papers Series is to thoroughly document the survey's data collection and data processing. The SOEP Survey Papers is comprised of the following series:

Series A – Survey Instruments (Erhebungsinstrumente)

Series B – Survey Reports (Methodenberichte)

Series C – Data Documentation (Datendokumentationen)

Series D – Variable Descriptions and Coding

Series E – SOEPmonitors

Series F – SOEP Newsletters

Series G – General Issues and Teaching Materials

The SOEP Survey Papers are available at <http://www.diw.de/soepsurveypapers>

1 General Information

Short summary

The aim of the data file BIOPAREN is to make the biography entries on the parents and on the social origin of the respondent available.

How biography information has been collected in the SOEP-IS

The intergenerational aspects of the persons surveyed are mainly by the information collected in the Biography Questionnaire. Data on respondents in Sample E (10 and 11) for years 1999 - 2011 as well as data on respondents in Sample I (19) for year 2010 have been taken over from the SOEP Core BIOPAREN dataset. In addition to the Biography Questionnaire, there has been an independent questionnaire (Youth Questionnaire) in SOEP Core since 2000 for the group of survey participants who are 16-17 years old and are being interviewed for the first time. From the wave 2011 onwards, all data are generated using exclusively information from the SOEP-IS Biography Questionnaire; there is no Youth Questionnaire in SOEP-IS.

How is BIOPAREN generated

The information available in BIOPAREN is obtained in two different ways. On the one hand, BIOPAREN includes the children's proxy entries on the parents from the Biography Questionnaire and the Youth Questionnaire. On the other hand, it contains the direct entries from the parents in the case the respondent lives in the same household as his parents. Every respondent is asked for information on the regional mobility of the children, as well as on the religious affiliation of the parents. However, information on the year of birth, as well as the education and occupational training of the parents, additional to the professional position and occupation of the father are not collected due to the filter command in the questionnaire when the parents (or the father) live in the same household as the child at the time of the survey. In this case, the direct entries of the parents are used. The identification of the parents occurs first of all through the variable STELL (relationship to head of household). The second source of information is the population of the file KIND, which includes all children under the age of 16. The file contains the personal number of the mother, as well as the personal number of the partner of the mother. Through both variables the mother, as well as the latest partner of the mother are identified, ideally, at the time when the child is 16 years old and thus one year before the first survey of the child. In the case the parents could not be identified by the STELL variable, this information is used. In a further step the biological mother is identified through the mother-child relationship in the file BIOBIRTH. In the event that still no personal number for the mother exists, the number from BIOBIRTH is used. Since 2001, an extra BIOBIRTH data-set exists for fathers (BIOBRTHM), which provides a new way of identifying fathers of SOEP-respondents. Since 2014, SOEP-IS does not deliver BIOBRTHM and integrates information on fathers into the BIOBIRTH dataset with an indicator on the gender of a parent.

2 Variables in File BIOPAREN

cid – Original Household Number

pid – Never Changing Person ID

bioyear – Year Of Biography Survey

1998	1998	0
1999	1999	750
2000	2000	22
2001	2001	25
2002	2002	25
2003	2003	34
2004	2004	16
2005	2005	23
2006	2006	21
2007	2007	33
2008	2008	15
2009	2009	18
2010	2010	1905
2011	2011	222
2012	2012	1720
2013	2013	2003
2014	2014	2302
2015	2015	205
2016		1729
-1	[-1] No Answer	0
-2	[-2] Does Not Apply	0
-3	[-3] Answer Improbable	0
-4	[-4] Inadmissible Multiple Answer	0
-5	[-5] Not Contained In Questionnaire	0
-6	[-6] Questionnaire Version With Modified Filtering	0

The variable BIOYEAR tells in which year the information was surveyed.

fpid – Person Number Father

-1	[-1] No Answer	10096
-2	[-2] Does Not Apply	1
-3	[-3] Answer Improbable	0
-4	[-4] Inadmissible Multiple Answer	0
-5	[-5] Not Contained In Questionnaire	0
-6	[-6] Questionnaire Version With Modified Filtering	0

See description of MPID.

mpid – Person Number Mother

-1	[-1] No Answer	9869
-2	[-2] Does Not Apply	1
-3	[-3] Answer Improbable	0
-4	[-4] Inadmissible Multiple Answer	0
-5	[-5] Not Contained In Questionnaire	0
-6	[-6] Questionnaire Version With Modified Filtering	0

The personal ID of the parents (fpid and mpid) is generated in three steps. 1. The parents of the respondent are identified by the relationship to the head of the household (STELL in

BRUTTO). Ideally, the children's parents are identified at the time of the first survey of the child, i.e., when the child is 18 years old. Furthermore, the social parents and not necessarily the biological parents are identified. 2. The parents of the respondent are identified via the mother's ID as well as the mother's partner ID in KIND. By using these variables the "oldest" parents are identified. Ideally, these are the parents at the time the child is 17 years old (one year before the first survey). 3. The mother-ID of the respondent can be identified in BIOBIRTH (1999 onwards). The father-ID in BIOBRTHM (2001 – 2013) and BIOBIRTH (2014 onwards). As BIOPAREN aims at identifying the parents that live in the household when the child is 18 years old, the steps above are carried out in the hierarchy 1-3 with step 1 having the highest priority. If one is interested in only biological parents, please have a look at the information in BIOBIRTH and BIOBRTHM.

bio – Form Of Biography Questionnaire

0	[0] Participation before 2001	772
1	[1] Biography Questionnaire	8296
2	[2] Youth Questionnaire	2000

Since 2008 the variable BIO is generated to indicate the origin of the information in BIOPAREN (Biography or Youth Questionnaire). This information is valid for all cases from 2001 onwards.

Since 2008 the variables ALTER, VALTER and MALTER were added to BIOPAREN. The variable ALTER gives the age of the respondent at the moment of the interview. VALTER gives the age of the respondents' father when the respondent answered the Biography Questionnaire or the Youth Questionnaire. The same was applied for the mothers with the variable MALTER. In order to generate the variables the information for the parents who are identified in the SOEP was gained with data from PPFAD. The proxy entries from BIOPAREN were used when there weren't any information of the respondents parents available.

In a first step, the information of the year of birth comes from the Biography Questionnaire. Due to a filter command, the children's proxy entries are only available for these variables when the parents or one parent and the child do not live in the same household at the time of the survey. After the parents' personal numbers have been identified the information can be compared with the entries in PPFAD. If there are differences of +/- two years the FPID / MPID will be set as missing. For the missing entries the information of the parents' year of birth is taken from PPFAD.

The variables are generated as usual using the information from the Youth Questionnaire or the Biography Questionnaire and the parents' direct-entries from PPFAD. As a next step the annual proxy information on a parent's death from the P-files are used. Furthermore we use information of the month of death of a parent from the year before. That means we have information on the death of a father or a mother for the years 2002 onwards. With this data a wrong marking as "no death in 2002" / "death in 2003" can be corrected if there is data from 2003 indicating that one parent died e.g. in October 2002. The variables VTODJ and MTODJ will be updated with new survey information. They are updated as long as the father or the mother is part of the SOEP sample. Since 2003 we additionally use the annual proxy information of respondents about reported life events of the last year.

The parents' education is generated with information from the Youth Questionnaire, the Biography Questionnaire and direct entries from the PGEN-files. Due to the filter command, the children's proxy entries are only available for VSBIL / MSBIL when the parents or one parent and the child do not live in the same household at the time of the survey. Along with other variables already contained in BIOPAREN, there will be an update with new survey information, insofar as no valid values exist in BIOPAREN.

The question is only asked to youngsters who are not living in the same household as their parents. PGEN information is used to compute a variable with data from 2006 onwards. In a further step the parents' personal numbers are used to match information on parents' nationality with data from the PGEN-files in the case if there are missing entries.

These variables give information about the country of origin of the respondents mother (MORIGIN) and father (VORIGIN). This information is collected in the Youth Questionnaires since 2007. Another source of information can be found in PPFAD by the direct-entries of the parents in the variable CORIGIN. These two kinds of information, proxy- and direct-entries, are used to generate MORIGIN and VORIGIN. In a first step we use the proxy-information for all the parents whose children made an entry in the Youth Questionnaire. For all the parents where there are no proxy-information available, we then use the direct-entries of the parents from the PPFAD-variable CORIGIN.

-6	[-6] Questionnaire Version With Modified Filtering	0

The questions about the religious affiliation of the parents are only asked to youngsters who are not living in the household of their parents. In order to provide as much information as possible we gather data from the Personal Questionnaires. The reconstruction of the information on the parents' religion is restricted to the survey years 1997, 2003 and 2007 as they are the only years where information of a respondent's religious affiliation is available. In all survey years the question was formulated differently but the information is made as consistent as possible.

The children's proxy entries on professional position and occupation of the father (VBSTELL) as well as VISCO88 and all prestige scores are available when the father and the child do not live in the same household at the time of the survey and if the father lived in Germany when the child was 16 years old. Since 2000, the same applies to the entries of the mother for MVSTELL and MISCO88. Besides the proxy entries parents' direct information from the \$P-files are used.

The variables contain the ISCO88 code for the father and mother. Hartmann and Schütz (2002) provide detailed information on the conducted occupational coding. This result has been slightly modified to fit to the ISCO-88 version for European Union purposes (ISCO-88(COM)) for the data generated within the SOEP-IS samples and waves (2012 onwards). For the waves 1999 – 2011, the old, unmodified version of the prestige scores was used and preserved in the variables with the “_old”-suffix, e.g. visco88_old / misco88_old.

The variables contain the prestige scores (EGP) for the father and mother.

Former versions and waves contained additional categories for unemployed persons (15) and pensioners (18). From wave 2015 on, the *egp*-variable has a more standard shape. Information on unemployment and retirement can be found in *PGSTIB* (occupational position) and *PGLFS* (labor force status).

This result uses the modified ISCO88 version for the data generated within the SOEP-IS samples and waves (2012 onwards). For the waves 1999 – 2011, the old, unmodified version of the prestige scores was used and preserved in the variables with the “_old”-suffix, e.g. *visco88_old* / *misco88_old*.

-6	[-6] Questionnaire Version With Modified Filtering	0

The variables VAORTAKT and MAORTAKT contain the latest available information about the parents' residence and on whether or not they are deceased, respectively. For persons without identified parents who answered the biography questionnaire up to the year 2011, the most recent available information from the Personal Questionnaire in, 2001, 2006 or 2011 was assumed. For those persons whose parents are identified in the SOEP, the information on the year of death in PPFAD was used for updating. If the year of death lies chronologically after the latest available information, VAORTAKT and MAORTAKT were put on "Has Died".

maortup – Year of Update of MAORTAKT

2001	75
2006	634
2007	19
2008	24
2010	1808
2011	304
2012	28
2013	213
2014	162
2015	98
2016	202
-1 [-1] No Answer	74
