1 Overview

PBRUTTO covers all individuals, who were successfully interviewed or were supposed to be interviewed at least once.

The data set provides gross cross-sectional information over time for all SOEP individuals living in realized households. Unique identifiers are PID SYEAR (PERSNR SYEAR) indicating individual household members over time. The personal IDs PID (PERSNR) and the Case-ID CID, indicating the source household within each (sub-)sample SAMPLE1, are fixed, whereas the household ID HID may vary for individuals over time.

Additional demographic information like SEX, GEBURT_v1/v2 and PNAT_v1/v2 are included in the dataset – indicating the available information at the time of the interview. For time-consistent applications, it is recommended to use the demographics in [PPATH/L].

In the following, the already mentioned information and variables on:

- The respondent's affiliation to the household
- Respondent's interview status, work form and result
- Respondent's penal history
- Respondent's dwelling status
- Additional questionnaires
- Non-respondents

are documented.

4 Demographic Variables

Information on respondent's unchanging demographics:

geburt_v1 – Year of Birth

? In this section, we are interested in the composition of your household. Therefore, I would like to register all persons in your household in a survey. If there is a person, who is normally lives in your household but is currently absent due to a hospital stay, long trip, boarding school or rest home (asylum*), military or civil service, etc. please include this person. For each person, the gender, birthdate, and position in the household should be written. So there is no confusion, the first name should be included. We will start with the principle earner (hv). The persons should be listed in sequence of their age, from oldest to youngest. // Year of birth 19 (*from: soep-core/soep-core-1984-hh/1:geburt10[35753]*)

Step 2: 1900 is added to the variable geburt_v1 for the year 1984 in order to convert it to a four digit year format and subsequently integrated into the harmonized variable geburt_h, if geburt_v1 is greater than or equal to 0 and geburt_v1 is less than or equal to 84. Step 3: The variable geburt_h is replaced with 1800 + geburt_v1 for the year 1984, if geburt_v1 is greater than 84.
